**Usage** This spreadsheet will work manually - print a blank copy and fill it in with a pen in the shop - or automatically, by entering the information at your computer and it will calculate Board Feet for you.  
**Notes** The Length, Width, and Thickness dimensions are set up to use fractions. Example, if you enter 1.5 the cell will return "1 1/2" If you enter "1 16/32" (note the space between the whole number and the fraction) The cell will return the lowest common denominator, or "1 1/2" Board Feet is automatically calculated for "Rough Cut"when all fields are entered, otherwise it will remain blank for you to fill in by hand.

TEST EXAMPLE	1	23 7/8	10 3/4	1 1/8	1	24 1/2	11 1/2	1 1/4	2.4	Bubinga	Happy Planning
